

Submission Worksheet

Submission Data

Course: IT202-008-S2026

Assignment: IT202 Module 1 Checkpoint

Student: Ashton T. (ast56)

Status: Submitted | **Worksheet Progress:** 100%

Potential Grade: 10.00/10.00 (100.00%)

Received Grade: 0.00/10.00 (0.00%)

Started: 1/30/2026 1:00:25 PM

Updated: 1/30/2026 2:02:51 PM

Instructions

- Overview Link: https://youtu.be/F_jCnIMf4Hw

1. Ensure you've followed the lessons to set up your Github, git, and VS Code
2. Fill in the below tasks (note it'll save as you go)
3. Once everything is filled in, ensure you click "Submit and Export PDF"
4. Upload the PDF to Github in a Module1 folder
5. Find the downloaded PDF and move it into the location of your local repository folder (don't use the Github upload option as we want to practice the git commands)
6. Use `git add .` to track all file changes (i.e., the PDF)
7. Use `git commit -m "Uploading M1 PDF"` to record the change and provide a meaningful message
8. Use `git push origin main` to move the changes to the remote repository's main branch (Note: Future assignments will have a dedicated branch name for their work)
9. Take the same PDF and upload it to the Canvas submission

Section #1: (10 pts.) Tasks

Progress: 100%

Task #1 (2.22 pts.) - Screenshot of VS Code Extensions for this class

Progress: 100%

Details:

- Ensure you have the following extensions
 - PHP Intelephense
 - WakaTime
 - Git Lens
 - MySQL Extension

MySQL Extension

Screenshot of Installed VS Extensions

Saved: 1/30/2026 1:00:25 PM

Task #2 (2.22 pts.) - Screenshot of WakaTime Setup

Progress: 100%

Details:

- Visit the WakaTime site
- Click the "Projects" tab and find your repository and select it
- Include a screenshot of the top part that shows the overall time and the repository name
- Scroll down and screenshot the bottom portion that shows the individual files/branches and include that. (You won't need to capture the visuals)

Task #3 (2.22 pts.) - Demonstrate that you have PHP available

Progress: 100%

Details:

- Run `php -v` in the terminal
- Run `php --ini` in the terminal
- Record the output (both should work and show proper configuration).

```
taylo@Panic MINGW64 ~/ast56-IT202-008 (main)
$ php --ini
Configuration File (php.ini) Path: ""
Loaded Configuration File:         "C:\php-8.5.1\php.ini"
Scan for additional .ini files in: (none)
Additional .ini files parsed:      (none)
```

PHP configuration

```
taylo@Panic MINGW64 ~/ast56-IT202-008 (main)
$ php -v
PHP 8.5.1 (cli) (built: Dec 17 2025 10:54:30) (NTS Visual C++ 2022 x64)
Copyright (c) The PHP Group
Zend Engine v4.5.1, Copyright (c) Zend Technologies
    with Zend OPcache v8.5.1, Copyright (c), by Zend Technologies
```

Task #5 (2.22 pts.) - Reflection

Progress: 100%

Details:

- Did you have any issues/problems this module? If so, what were they and how did you solve them?
- Did you learn anything new this module? If so, provide some brief details.
- If both answers were no, briefly explain your prior background.

Your Response:

There was an issue with the PHP step in that the terminal was saying that PHP was a command not found so I had to research how to fix that and i eventually did by first downloading php and creating a path to it via the terminal.

I did learn a bt more about navigating VScode. I never really used it that much so it was nice to see and use some of the unfamiliar features

was nice to see and use some of the animal's features.
